1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the specification, page 1, lines 6 - 7, "which will issue as" was changed to -- now -- to update the status of the parent application.

2. The following is an examiner's statement of reasons for allowance: The prior art teaches a variety of optical measurement arrangements that correct for noise due to ambient electromagnetic energy in the detector output signal. Martin applies a dark current correction signal at the input of a preamplifier. Kaestle uses modulation and demodulation techniques to minimize ambient signal noise. Richardson et al. (USPN 5,555,882 - cited by Applicant) performs an analysis of possible frequencies and chooses a frequency to minimize noise effects on the desired signal. Yelderman teaches an arrangement that minimizes ambient light noise by driving the emitters at a frequency that meets selection criteria for minimizing the noise effect (column 7, line 21-column 8, line 29). However, none of the prior art teaches or suggests, either alone or in combination, a method for minimizing noise due to ambient electromagnetic energy in a desired output signal that includes using acceptable modulation cycle times (T) to select a sampling frequency (f_s) and number of sample periods (Q) using an equation $T=4Q/f_s$, in combination with the other claimed steps.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
